Bodies: A Systematic Approach - In translation motion, all the particles forming a rigid body move along parallel paths. If all particles forming a rigid body move along parallel straight line, it is known as rectilinear translation. Sat, 10 Nov 2018 09:16:00 GMT Kinematics and Dynamics of Particles and Rigid Bodies in ... - We will study the dynamics of particle motion and bodies in rigid planar (2D) motion. This will consist of both the kinematics and kinetics of motion. Kinematics deals with the geometrical aspects of motion describing position, velocity, and acceleration, all as a function of time. For a rigid body undergoing fixed axis rotation about the center of mass, our rotational equation of motion is similar to one we have already encountered for fixed axis rotation, $\ddot{\theta}$, $\text{cm ext} = d L \text{ cm spin} / dt$. 21.2 Translational Equation of Motion We shall think about the system of particles as follows.
